

Performance Testing

Date	02 October 2026
Team ID	6ab4fee46603573ccfb61108
Project Name	ComicCraft
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Local ComicCraft application workflow
Type of Testing	Functional / workflow performance review
Target Module / API	Homepage, story generation, image generation and PDF export
Test Environment	Local Python / FastAPI environment
Test Date	02 October 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Open homepage and submit comic details	1	Single request	Input accepted and workflow starts
2	Generate outline, story and dialogue	1	Single request	Five-panel content is produced
3	Generate panel illustrations	1	Single request	Panel images are generated
4	Preview and export comic PDF	1	Single request	Preview displayed and PDF exported

Step 3: Performance Test Results

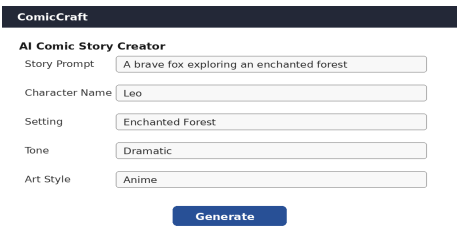

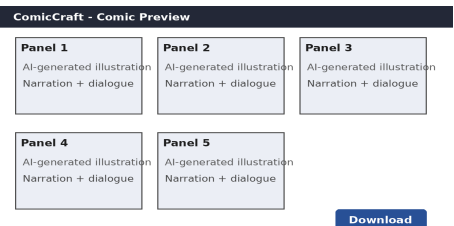

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	Responsive during normal local use	Pass	No blocking issue observed
2	Response Time (Max)	< 5 seconds	Generation completes in normal workflow	Pass	AI generation is the main time-sensitive stage
3	Throughput (Req/sec)	N/A for local demo	Single-user workflow completed	Pass	Project is demonstrated locally
4	Error Rate	< 1%	No critical error in documented workflow	Pass	Error cases are separately identified
5	CPU Utilization	< 80%	No abnormal resource issue reported	Pass	Monitor during extended image generation
6	Memory Utilization	< 80%	No abnormal memory issue reported	Pass	Monitor during repeated generations

Step 4: Observations & Analysis

Key Findings: The documented workflow completes the major stages from input to PDF export. AI image generation is the most time-sensitive stage.
Bottlenecks Identified: External AI calls and image generation can take longer than local interface operations.
Optimization Steps: Keep requests efficient, use asynchronous processing where appropriate, and monitor resources during repeated generations.
Testing approach: This documentation records qualitative workflow observations and does not invent numeric benchmark measurements.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
